Page 2 of 7

**AMENDMENTS**

*In the Specification:*

Please amend paragraph 0066 of the application as follows below. More specifically, in the third sentence please delete "determine" and replace with "determined" on page 19 of the specification.

In block 624, after reducing the power supplied to the power amplifier 160, it is determined whether saturation of the power amplifier 160 is detected. If saturation of the power amplifier is not detected, then, in block 626, it is determined whether the voltage  $V_{BATT}$  is at a minimum. If the voltage  $V_{BATT}$  is not at a minimum, then, in block 628 it is determined whether the power amplifier 160 is powering down. If the power amplifier 160 is powering down, then the process ends.

In block 624, after reducing the power supplied to the power amplifier 160, it is determined whether saturation of the power amplifier 160 is detected. If saturation of the power amplifier is not detected, then, in block 626, it is determined whether the voltage  $V_{BATT}$  is at a minimum. If the voltage  $V_{BATT}$  is not at a minimum, then, in block 628 it is determined whether the power amplifier 160 is powering down. If the power amplifier 160 is powering down, then the process ends.
